

Microsoft Ignite

A Reference Architecture for Windows Virtual Desktop Printing

Christoph Hammer
Senior Vice President
Cloud Services

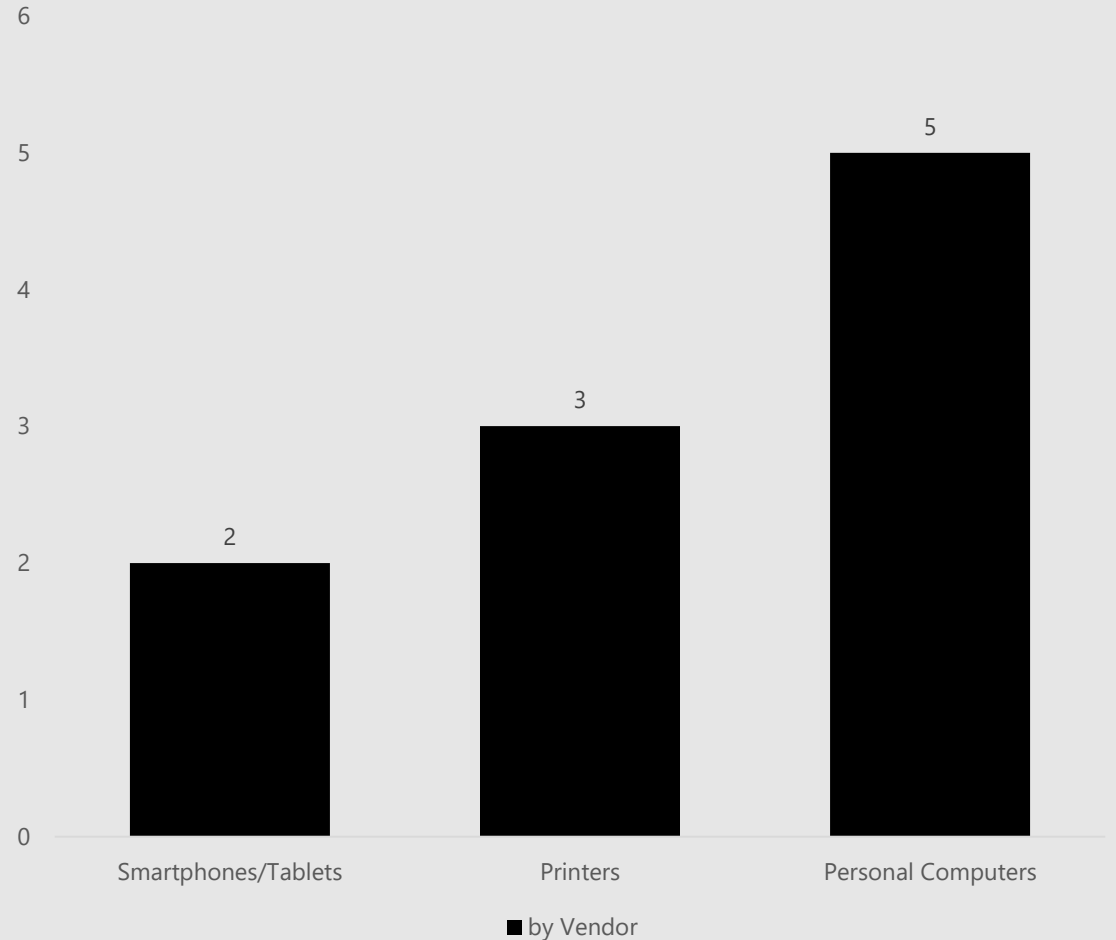

THR3160

Supporting the 75%

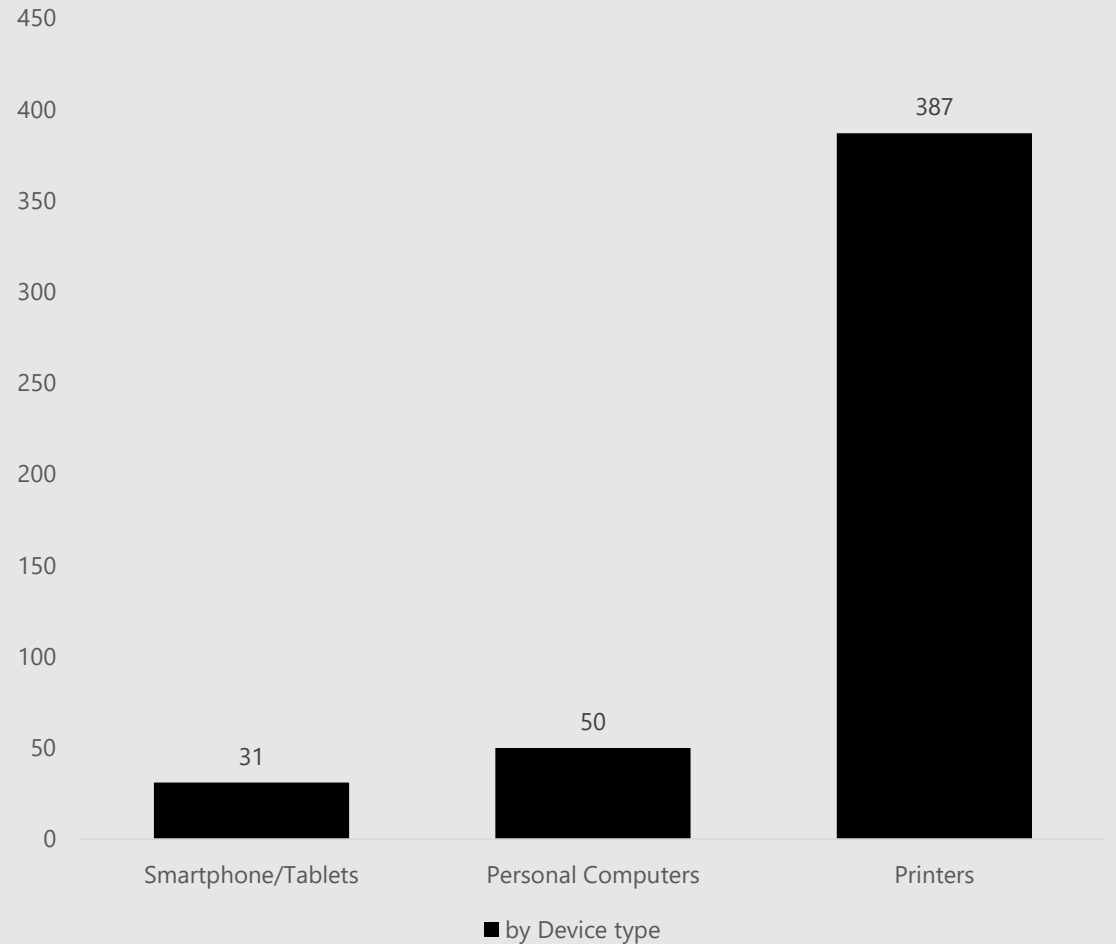

How many Vendors do I need to support?

Supporting the 75%

How many Devices* do I need to support?

*Devices that are currently on sale

Supporting 100%

How much software do I need to support?

Let's focus on the Now

Worldwide 650 million printers are in use

Over 50 vendors

Around 90 million printers sold in 2018

3-5 printer drivers for a new printer

Printer problems won't go away

Printer drivers

Endpoint configuration

Network Design considerations

Access Control

Cost control

Windows Virtual Desktop brings new challenges

Another Layer of configuration

- Printer assignment
- Printer Drivers (again)
- Client devices and protocol capabilities

Communication on a global scale

- Print job size
- Network Bandwidth
- Latency
- Bi-directional communication
- Print protocol
- Accessibility

Ideal Architecture

Addresses local printing **and** WVD printing challenges

Designed for locations not devices

Independent from RDP printer redirection and VPNs

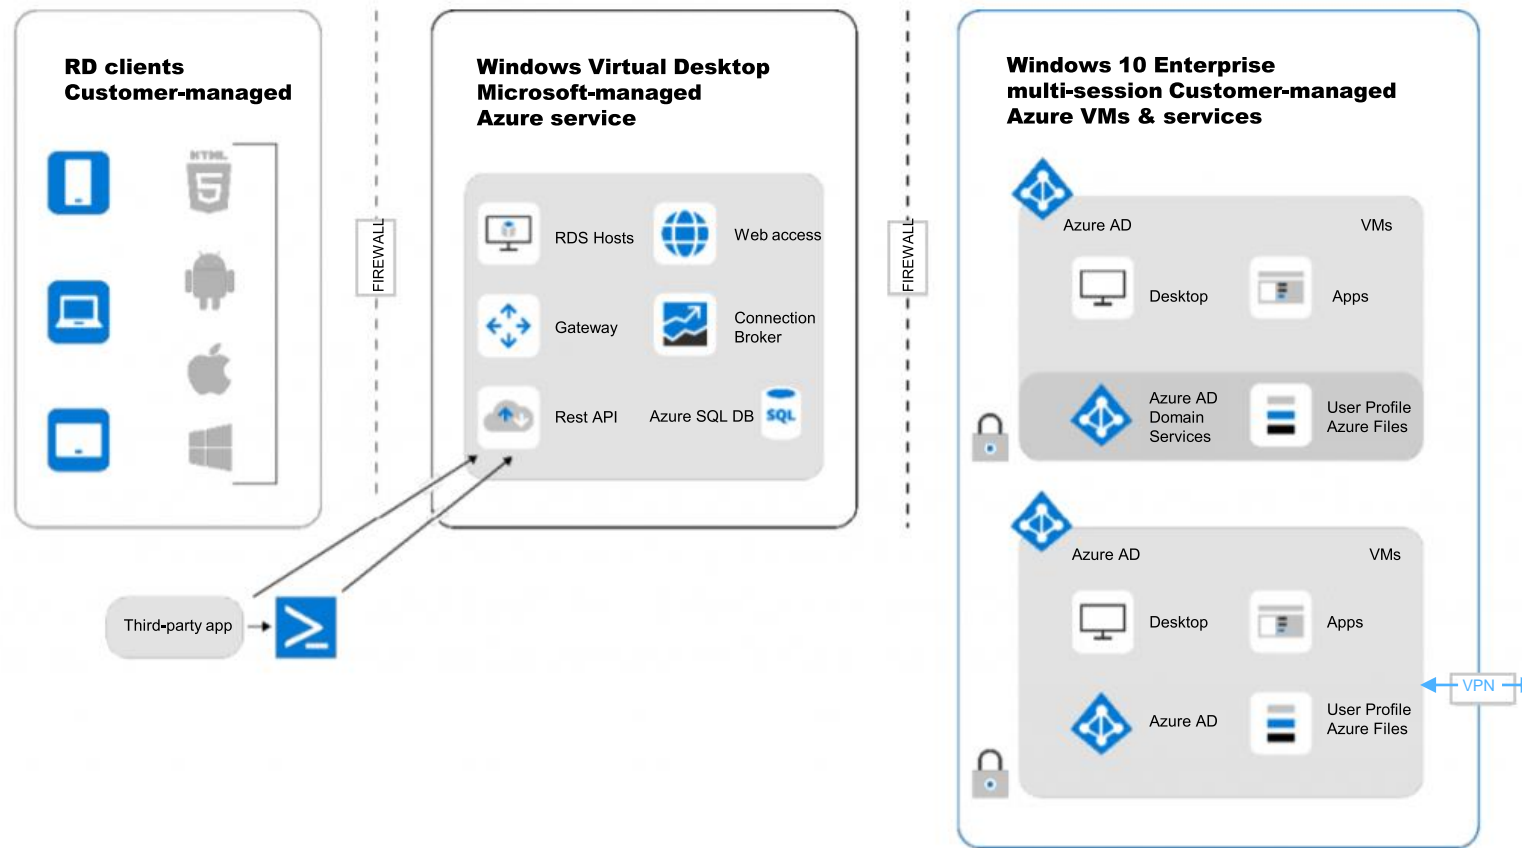

Supports existing printers

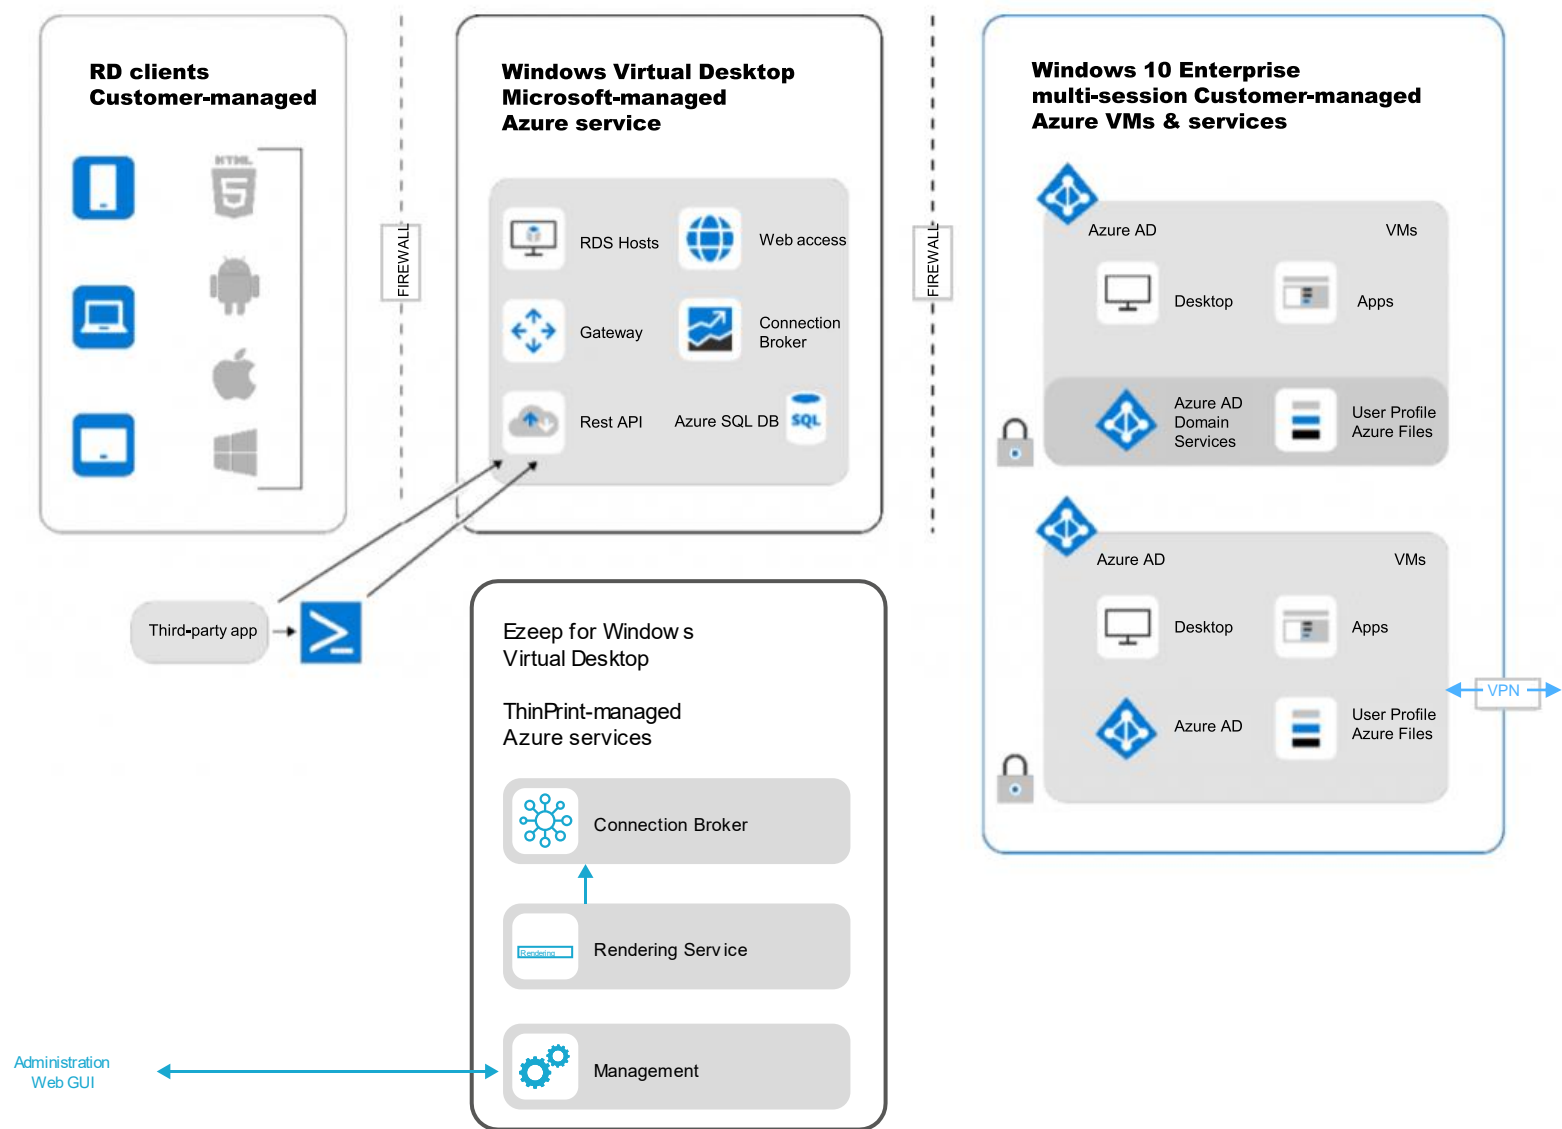

Requires no changes by users

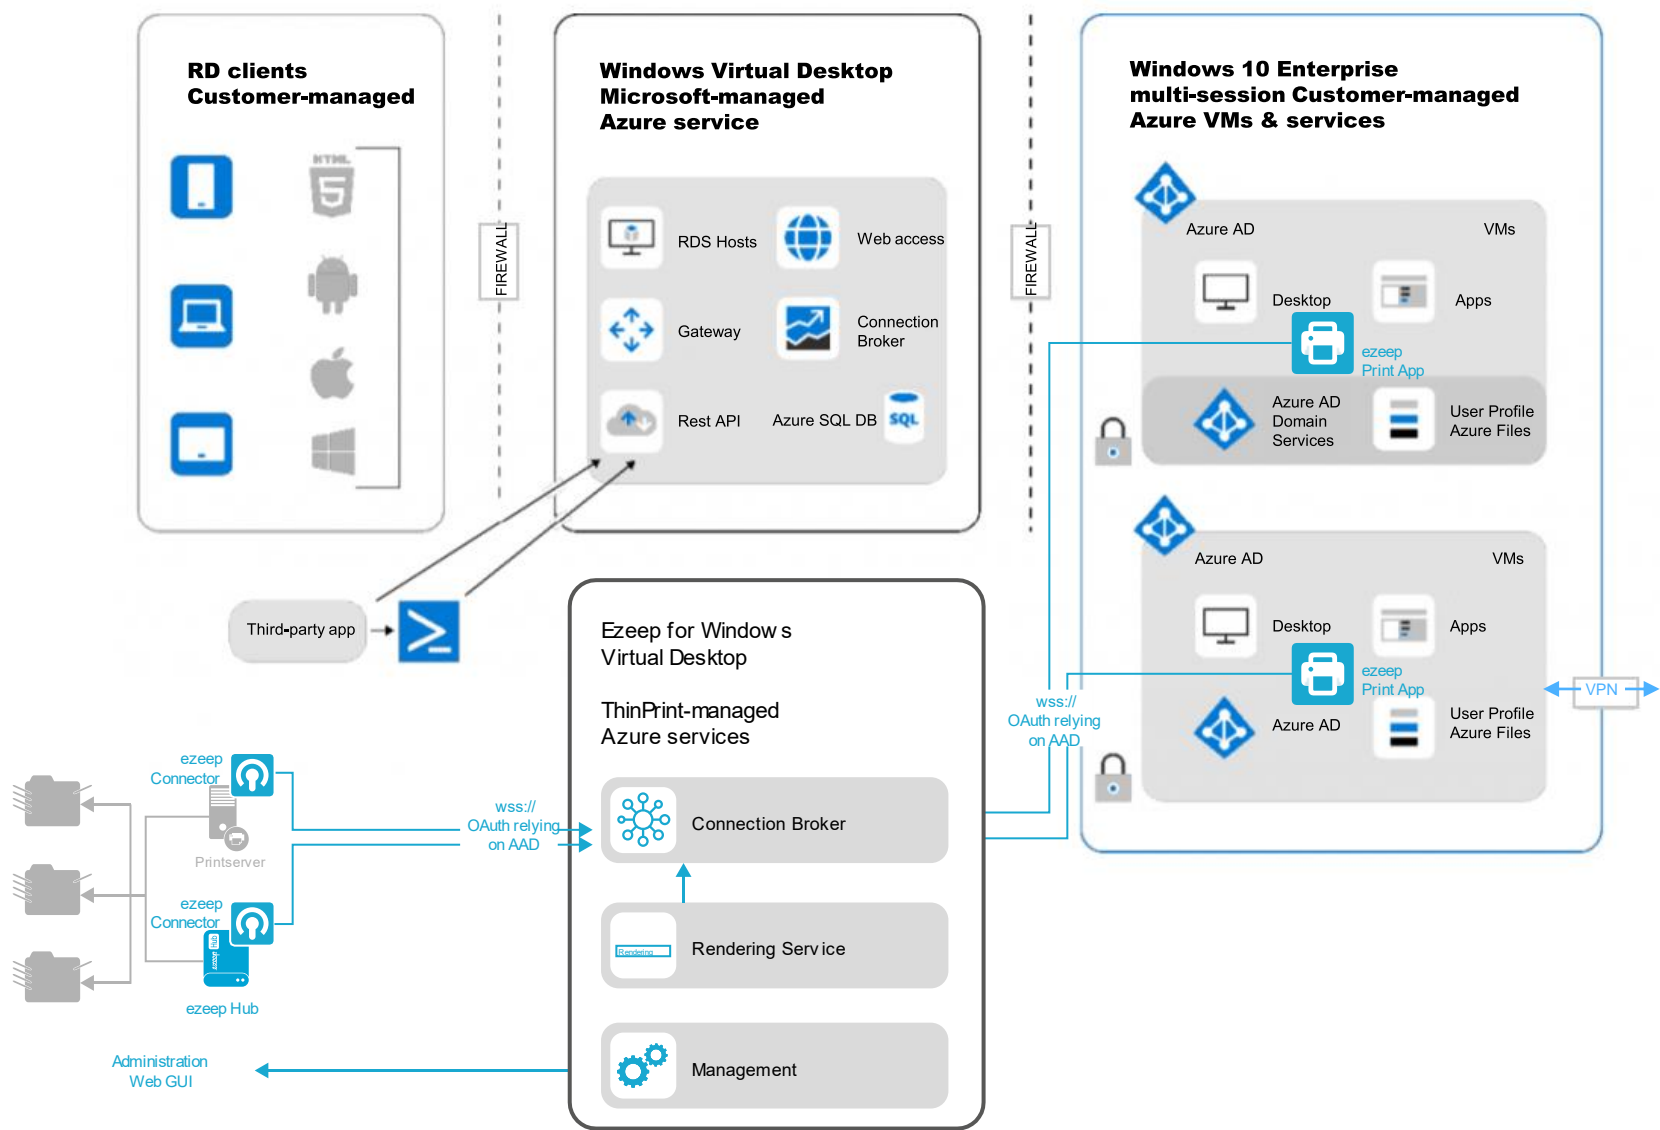

Printing as Service for Windows Virtual Desktop

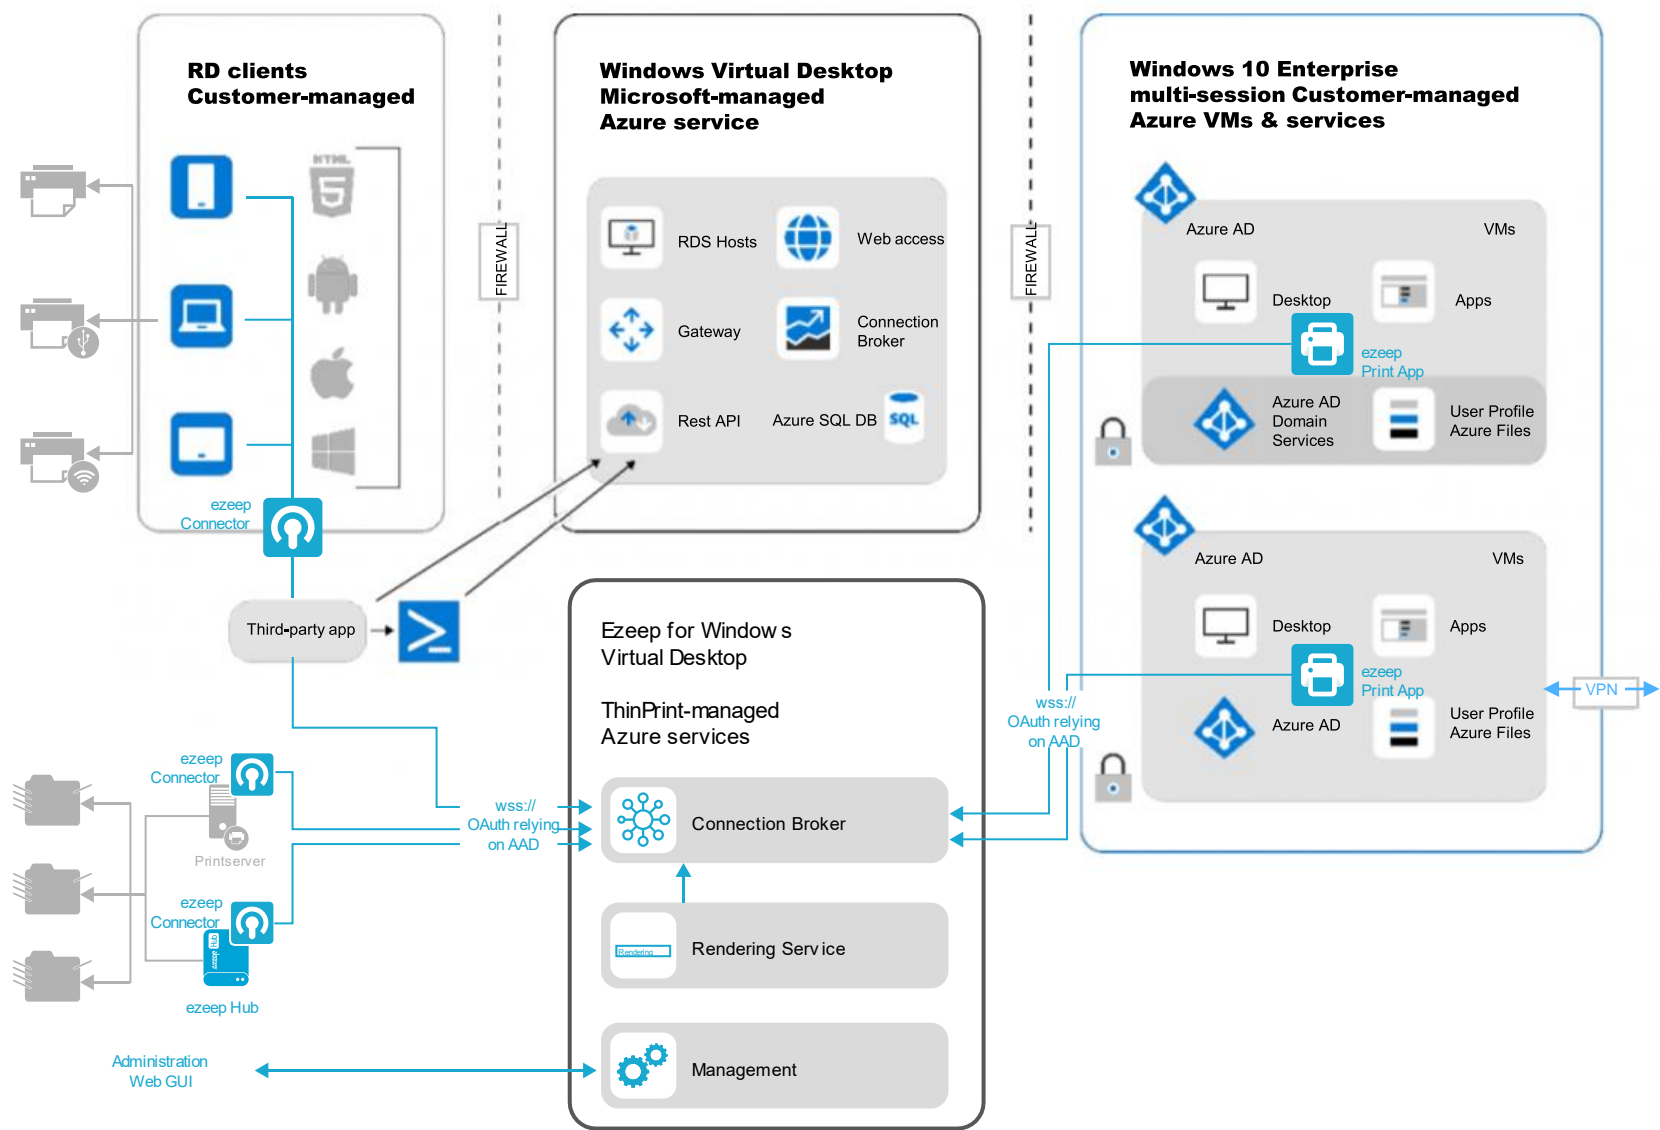

Printing as Service for Windows Virtual Desktop

Printing as Service for Windows Virtual Desktop

Printing as Service for Windows Virtual Desktop

Developer Access to ezeep Cloud Printing

Print API

Connector API

Management API

Platform for more

Printing from Office365 apps

Mobile printing for iOS and Android

Print activity reporting

Secure/follow me printing

Print policies

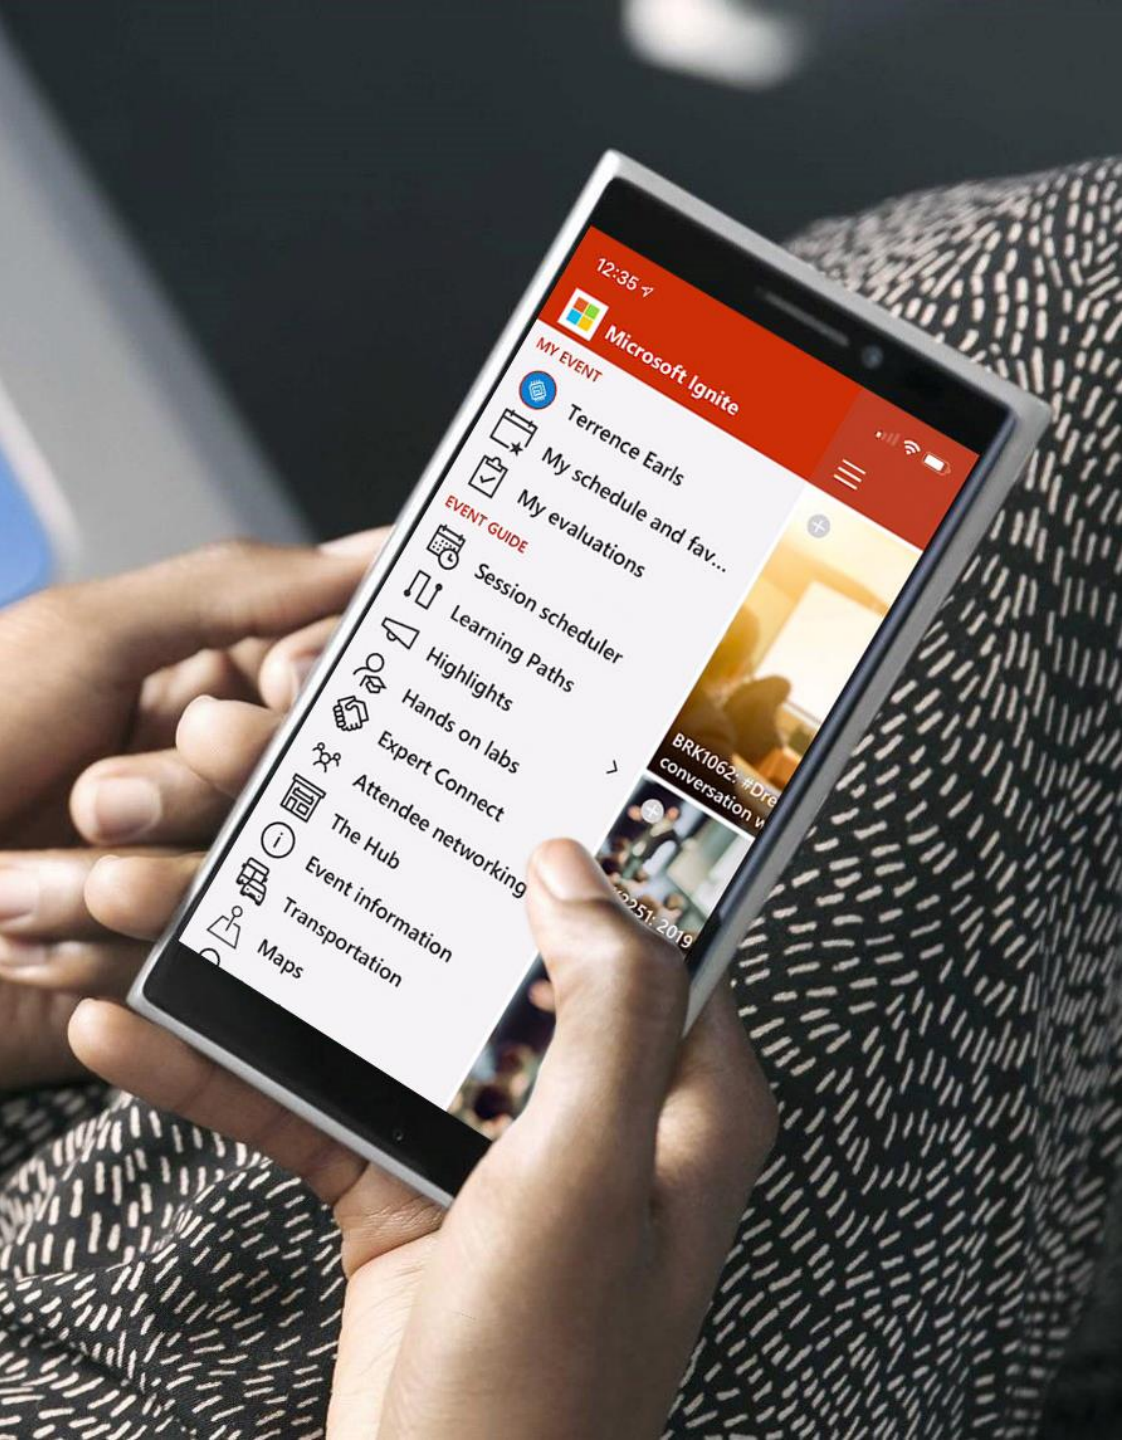

Best Practices

Recommendation	Reason	ezeep
Design for locations, not users' devices	Simplicity, support for all devices	ezeep Hub or software for print server Cloud-hosted connection broker
Limit printer drivers	Reduce overhead, avoid conflicts, improve stability	Cloud Rendering
Don't make VPNs a requirement	Flexibility, Costs, accommodate smaller, dynamic workstyles	Encrypted dedicated tunnel for printing, secured with TLS
No block-processing	Speed, each step starts before the previous one is done	Print streaming within Windows print subsystem and compression
No islands	Interoperability, systems need to exchange information for maximum overall benefits	Developer program, open APIs

Try it out and visit us at booth 149
