

Server-Free Printing for PC & Mac

Discover the advantages of direct IP printing combined with the simplicity of an easy-to-use cloud portal. With ezeep Dash, your entire print management is taken care of in the cloud, while printing remains a local process and even works without an internet connection.

Make Print Servers Obsolete!

Don't just replace print servers with yet another management server.

This Makes ezeep Dash So Easy:

Get Started Instantly

Simply log in, define users, choose drivers and assign printers to individuals or groups. An unobtrusive agent on the user's desktop takes care of the rest.

Direct IP Printing

ezeep Dash enables local IP printing that doesn't require an internet connection. When it comes to printing, there will never be outages again.

Empower Users

Users can manage their own printers and default settings via the optional Self Service Portal. This reduces administration efforts and helpdesk calls.

100% Cloud, 100% Scalable

ezeep Dash is developed as a Cloud platform from the start and backed by ThinPrint, a company with decades of experience in print management and projects with up to 250,000 users.

No More Print Servers

Make print servers obsolete! Use a single cloud console that easily handles printers, printer drivers, users, IP addresses, etc.

Unique Driver Store

Backed by the Cloud Printing Alliance, ezeep Dash comes with a pre-loaded driver store. There is no need to upload drivers, you can simply select them from the list.

Reduce Costs

Benefit from a far smaller investment in hardware and software as well as significantly less overhead for IT administration and support.

Efficient, easy printing is what you've been waiting for?
