

Cloud-Managed Printing

ezeep yields significant savings and streamlines processes by managing and powering your printing and print infrastructure through one comprehensive centralized cloud application.

Cloud

ezeep is the only print management service that lets organizations centrally manage their entire print infrastructure from the cloud, eliminating the need for a range of disparate products, reducing overall operating and printing costs, and increasing employee and IT productivity.

- One unified cloud service for print management encompassing a central administration console for user, printer and print management and apps for driverless and mobile printing for guests and users
- Server applications for Windows, Linux and Mac server environments to securely connect printers with the cloud and to shift the burden of print management to ezeep
- Desktop and mobile applications for printing whereby all print traffic is handled over a secure connection (https), and jobs are only available for the printer for security and data protection reasons
- Works with all printers regardless of manufacturer, type and model
- Outsource and save costs and time
- Cloud-based software-as-a-service that is continuously updated and managed
- Modernize printing and improve processes
- Consolidate the need for disparate tools and internal IT support

Mobile

Mobile printing out of the box: instantly deploy mobile printing in your company that adheres to all access permissions in your system without the need to buy an external mobile printing services that you have to hook into your user management individually.

- Print any Microsoft Office documents, PDFs and images from your smartphone or tablet using ezeep's applications for iPhone, iPad, Android and Android tablets
- Users can print independently without the need for IT support but administrators stay in full control of all print rules and printer access
- Advanced printing capabilities inside the apps like copies, duplex, page range and "Print Later" compliant with any printing rules you have defined
- Mobile printing is integrated with ezeep and requires no additional hardware or software to roll out or administer
- Print on any printer regardless of type, model or manufacturer as long as it is connected to ezeep

Driverless

ezeep for desktop is a virtual print driver for Mac and Windows that is installed once on user devices and enables users to print to any printer right from their desktop applications using the common print dialogue. ezeep for desktop automatically adheres to any and all print rules, pricing or quotas you have set up.

- ezeep's applications for PC and Mac automatically populate the list of available printers in the standard print dialogue based on print rules, access rights and location of the user
- ezeep's applications for PC and Mac eliminate the need for drivers on PC and Mac operating systems and improve the usability of printing for end users.
- Users can print any file as they normally would using common print dialogue job settings but without the need to install or update drivers locally
- You no longer need to distribute or update drivers for anyone on any device
- Users can install ezeep for desktop self-service, eliminating the need for IT support
